EDUCATION

Bachelor of Computer Science, Sheridan College

2023 – 2027

SKILLS

Programming Languages: C++, TypeScript/JavaScript, Java, Python, HTML/CSS
Technologies: Git, Docker, Vim, Tmux, Kubernetes, Linux, SQL, Grafana, InfluxDB, CMake
Concepts: Distributed Systems, Networking, Concurrency, Compiler Design

EXPERIENCE

Sheridan Datathon Founder November 2025
Sheridan Datathon *Mississauga, ON*

- Founded Sheridan's first datathon, themed around UN Sustainability Goals; attracted **200+ participants**.
- Managed end-to-end execution: venue, competition design, website, judging, marketing, and registration.
- Coordinated with student union, facilities, faculty, sponsors, food vendors, and judges.
- Led **30+ organizers/volunteers** and **9 mentors**; raised **\$6.8k** in sponsorships.

Hackathon Lead, Workshop Member June 2025 – Present
Google Developer Group, Sheridan *Oakville, ON*

- Lead planning and execution of GDG hackathons.
- Delivered a workshop on Language Processing fundamentals to **25+ students**.

Website Developer July 2025 – Present
Sheridan Computer Science Club *Oakville, ON*

- Built an interactive REPL console for the club website.
- Implemented a custom lexer and parser in JavaScript for command processing.

PROJECTS

Kiwi (Distributed Trading Simulation Platform)

- Designed the architecture for a distributed trading simulation ecosystem—including a multithreaded market server, distributed clients, and a dashboard API—with custom networking, order routing, and serialization.
- Developed key components and produced detailed architecture diagrams and documentation covering system flows, concurrency models, and distributed interactions.
- Created a scalable infrastructure plan using Docker, Kubernetes, Grafana, and InfluxDB to support deployment, monitoring, and real-time observability.

Cherry Compiler

- Designing a dual-language system: Pit (low-level) and Cherry (high-level), where Cherry compiles to Pit.
- Formally specifying grammars and implementing compiler infrastructure in modern C++.
- Hand-writing performant lexers and parsers for both languages.
- Lowering ASTs into a custom intermediate representation (IR) and generating LLVM code.

RESEARCH

- **Student Researcher:** Lead the research of a supervised paper on LLM-IoT under Prof. Mouhamed Abdulla.
